`ppp` Documentation

Daniel Bruder

Version 0.6.0

Abstract

`ppp` allows you to use pandoc in new ways by rendering ASCII-markup to beautiful pictures right from within pandoc's verbatim environments.

See below for illustrative examples and detailed usage instructions.

Bonus on top: Leaving out `ppp` form the typesetting pipeline will still render your document and the verbatims with the ASCII-markup will still stay readable!

Contents

General usage

In each case, you will use pandoc's verbatim environment, set the rendering engine and additional options:

```
~~~~~ {.renderer .option1 .option2=value2}
 --- RENDERER-SPECIFIC MARKUP GOES HERE ---
~~~~~
```

General Renderers

The renderers available to `ppp` are:

- ditaa
- yuml diagrams:
  - class diagramas (cf. Figure 5)
  - usecase diagramas (cf. Figure 6)
  - activity diagramas (cf. Figure 7)
- dot
- neato
- rdfdot
- plantuml

General Options

This is a list of the general options, compatible with any type of renderer:

- `.scale=90%`
- `.label=fig:my-figure`
- `.title="Some label for the figure"`

---

ditaa Diagrams

In order to generate `ditaa`-diagrams, ditaa needs to be installed.

For an exhaustive list of options and possibilities, please check the ditaa homepage.

ditaa Options

Apart from the General Options, the possible options specific to ditaa are:

- `.rounded-corners`
- `.no-shadows`
- `.no-antialias`
- `.no-separation`

ditaa Examples

Using ditaa, the following markup will produce Figure 1.

```
~~~~~ {.ditaa .rounded-corners .no-shadows
       .scale=90% .title="The ppp and pandoc pipeline"
       .label=fig:pipeline-overview  .no-antialias .no-separation
      } # Caution! These lines actually would have to be on *one* line only!
+-----------------+       +--------+           +--------------------+
| markdown source |------>| ppp    |------*--->| pröcessed markdown |
+-----------------+       +--------+      |    +--------------------+
                               |          \--->| image files        |
                     +-------------------+      +--------------------+
                     | diagram creation |
                     +------------------+
                     | ditaa/dot/rdfdot |
                     +------------------+
~~~~~
```

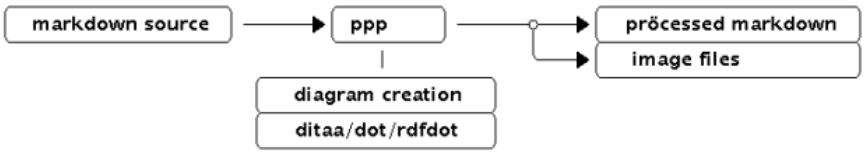

Figure 1: “The ppp and pandoc pipeline”

As a contrast, turning off several options, ditaa will produce an output as in Figure 2:

```
~~~~~ {.ditaa .scale=90% .title="The ppp and pandoc pipeline #2" .label=fig:pipeline-overview-2}
+-----------------+       +--------+           +--------------------+
| markdown source |------>| ppp    |------*--->| pröcessed markdown |
+-----------------+       +--------+      |    +--------------------+
                               |          \--->| image files        |
                     +------------------+       +--------------------+
                     | diagram creation |
                     +------------------+
                     | ditaa/dot/rdfdot |
                     +------------------+
~~~~~
```

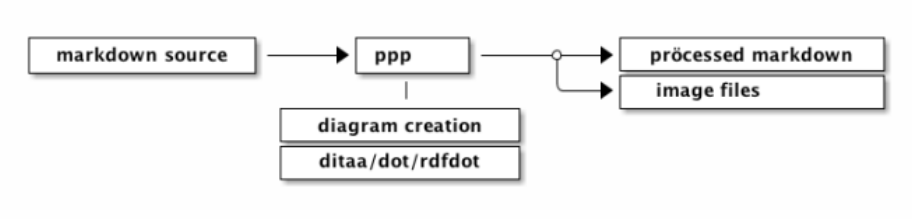

Figure 2: “The ppp and pandoc pipeline #2”

---

dot Diagrams

`dot` rendering is done through GraphViz's engine. Please cf. Graphviz's Documentation for exact usage specifics on the usage of `dot`.

dot Options

- currently none apart from the General Options

dot Examples

With `dot` as the *renderer*, the following markup produces the figure as seen in Figure 3.

```
~~~~~ {.dot .scale=50% .title=dot Finite State Automaton .label=fig:dot-fsa}
digraph finite_state_machine {
  rankdir=LR;
  size="8,5"
  node [shape = doublecircle]; LR_0 LR_3 LR_4 LR_8;
  node [shape = circle];
  LR_0 -> LR_2 [ label = "SS(B)" ];
  LR_0 -> LR_1 [ label = "SS(S)" ];
  LR_1 -> LR_3 [ label = "S($end)" ];
  LR_2 -> LR_6 [ label = "SS(b)" ];
  LR_2 -> LR_5 [ label = "SS(a)" ];
  LR_2 -> LR_4 [ label = "S(A)" ];
  LR_5 -> LR_7 [ label = "S(b)" ];
  LR_5 -> LR_5 [ label = "S(a)" ];
  LR_6 -> LR_6 [ label = "S(b)" ];
  LR_6 -> LR_5 [ label = "S(a)" ];
  LR_7 -> LR_8 [ label = "S(b)" ];
  LR_7 -> LR_5 [ label = "S(a)" ];
  LR_8 -> LR_6 [ label = "S(b)" ];
  LR_8 -> LR_5 [ label = "S(a)" ];
}
~~~~~
```

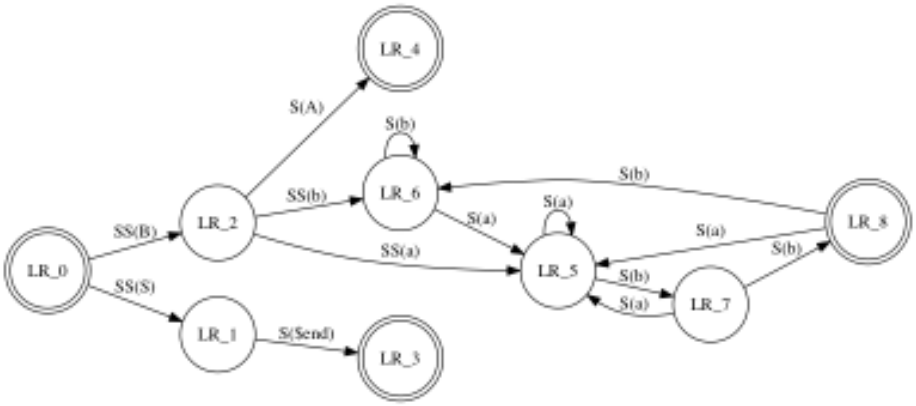

Figure 3: dot Finite State Automaton

neato Diagrams

`neato` diagrams behave very similarly to dot Diagrams. Please cf dot Diagrams for more information

neato Options

- same as dot Options

neato Examples

The following example produces Figure 4.

```
~~~~~ {.neato .scale=50% .title=neato diagram .label=fig:neato-diagram}
graph G {
  n0 -- n1 -- n2 -- n3 -- n0;
}
~~~~~
```

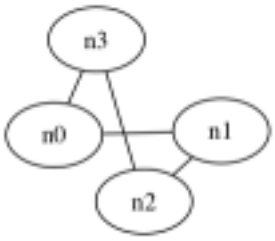

Figure 4: neato diagram

yUML

yUML needs a network connection and uses http://yuml.me as the rendering service.

yUML Options

Options specific to yUML can be:

- `.type=`: any of `[ class, activity, usecase ]`
- `.style=`: any of `[ scruffy, boring, plain ]`
- `.direction=`: any of `[ LR, RL, TD, ]`

yUML Examples

yUML Class diagrams

With *yUML* as the renderer, setting `.type=class` and using the style `.style=boring`, the following markup produces Figure 5.

```
~~~~ {.yuml .style=boring .type=class .direction=TD .title=yUML class diagram .label=fig:yuml-class-diagram}

[Customer] +1 ->        *[Order]
[Order]   ++1 -items>   *[LineItem]
[Order]       -0..1>     [PaymentMethod]
~~~~
```

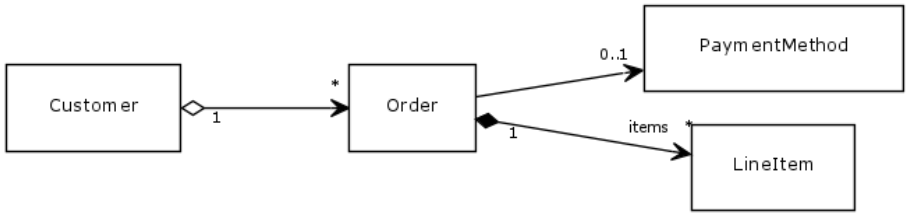

Figure 5: yUML class diagram

yuml Usecase diagrams

With `scruffy` style and `.type=usecase`, the following example produces Figure 6.

```
~~~~ {.yuml .style=scruffy .type=usecase .title=yUML usecase diagram .label=fig:yuml-usecase-diagram}
// Cool Use Case Diagram
[Customer]-(Make Cup of Tea)
(Make Cup of Tea)<(Add Milk)
(Make Cup of Tea)>(Add Tea Bag)
~~~~
```

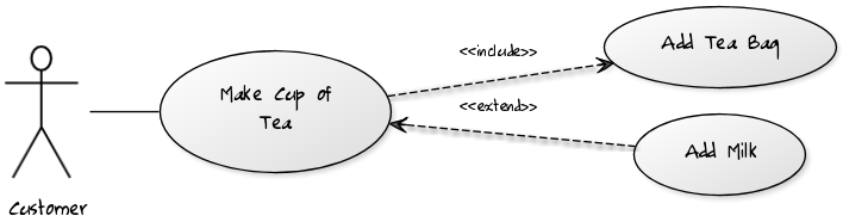

Figure 6: yUML usecase diagram

yuml Activity diagrams

Lastly, using `.type=activity` and `.style=plain` the following example produces Figure 7.

```
~~~~ {.yuml .style=plain .type=activity .title=yUML activity Diagram .label=fig:yuml-activity-diagram}
(start)->|a|,|a|->(Make Coffee)->|b|,|a|->(Make Breakfast)->|b|,|b|-><c>[want more coffee]->(Make Coffee),<c>[satisfied]->(end)
~~~~
```

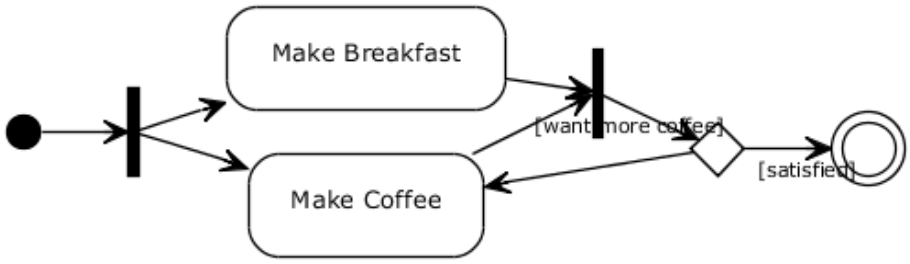

Figure 7: yUML activity Diagram

---

plantuml

plantuml – based on graphviz –, has an extensive feature set

plantuml Options

- *General Options*

plantuml Examples

plantuml Example 1

With *plantuml* as the renderer, the following markup produces Figure 8.

```
~~~~ {.plantuml}
@startuml
scale 350 width
[*] --> NotShooting

state NotShooting {
  [*] --> Idle
  Idle --> Configuring : EvConfig
  Configuring --> Idle : EvConfig
}

state Configuring {
  [*] --> NewValueSelection
  NewValueSelection --> NewValuePreview : EvNewValue
  NewValuePreview --> NewValueSelection : EvNewValueRejected
  NewValuePreview --> NewValueSelection : EvNewValueSaved

  state NewValuePreview {
     State1 -> State2
  }

}
@enduml
~~~~
```

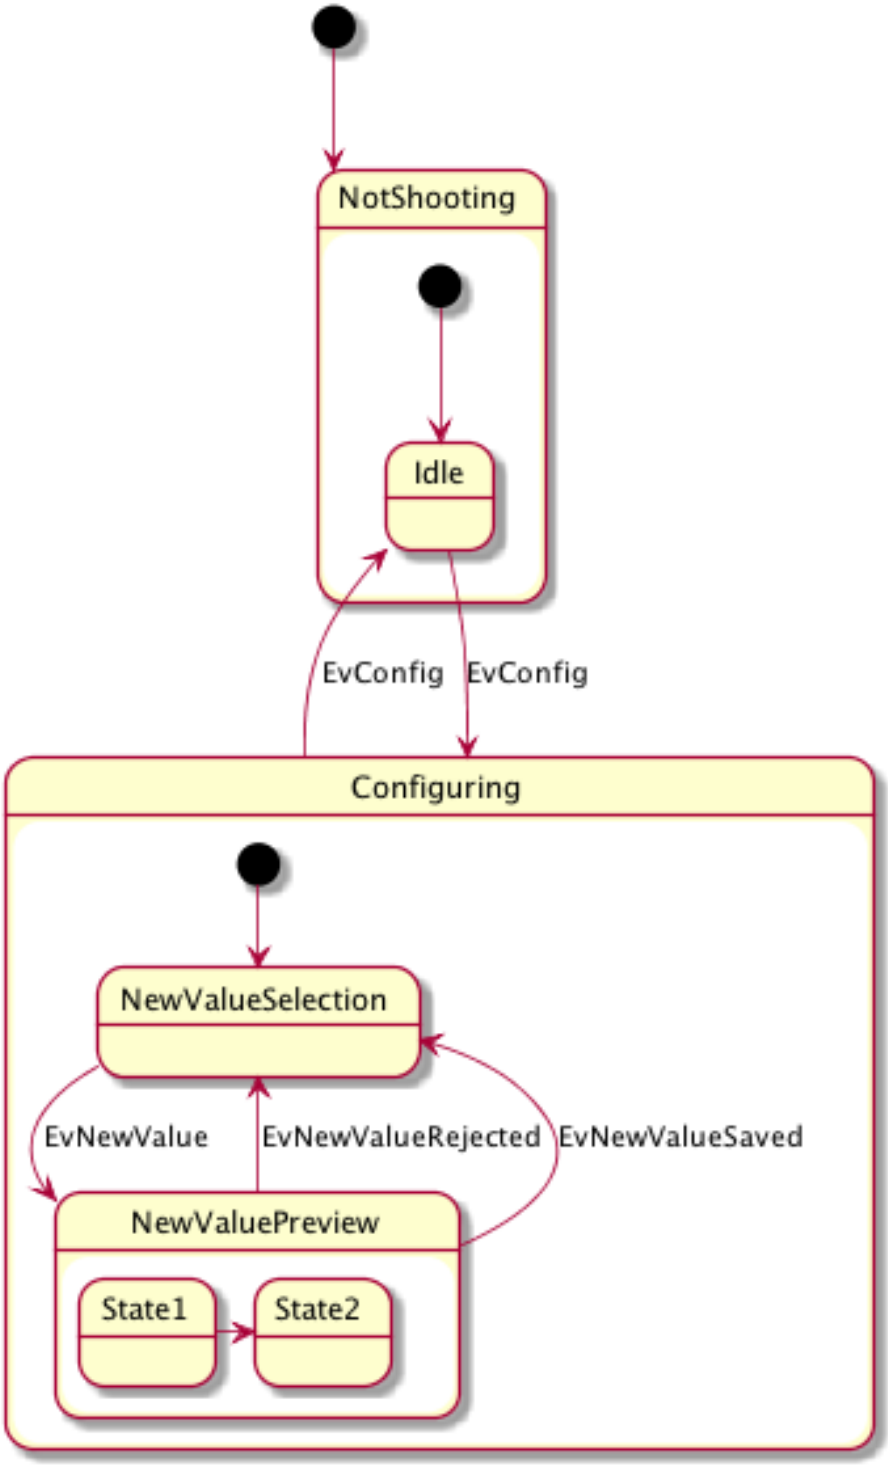

Figure 8: PlantUML Example 1

plantuml Example 2

If the colors don't match your taste exactly, add `skinparam monochrome true` to retrieve Figure 9.

~~~~ {.plantuml}
@startuml

skinparam monochrome true

actor User
participant "First Class" as A
participant "Second Class" as B
participant "Last Class" as C

User -> A: DoWork
activate A

A -> B: Create Request
activate B

B -> C: DoWork
activate C
C --> B: WorkDone
destroy C

B --> A: Request Created
deactivate B

A --> User: Done
deactivate A

@enduml
~~~~

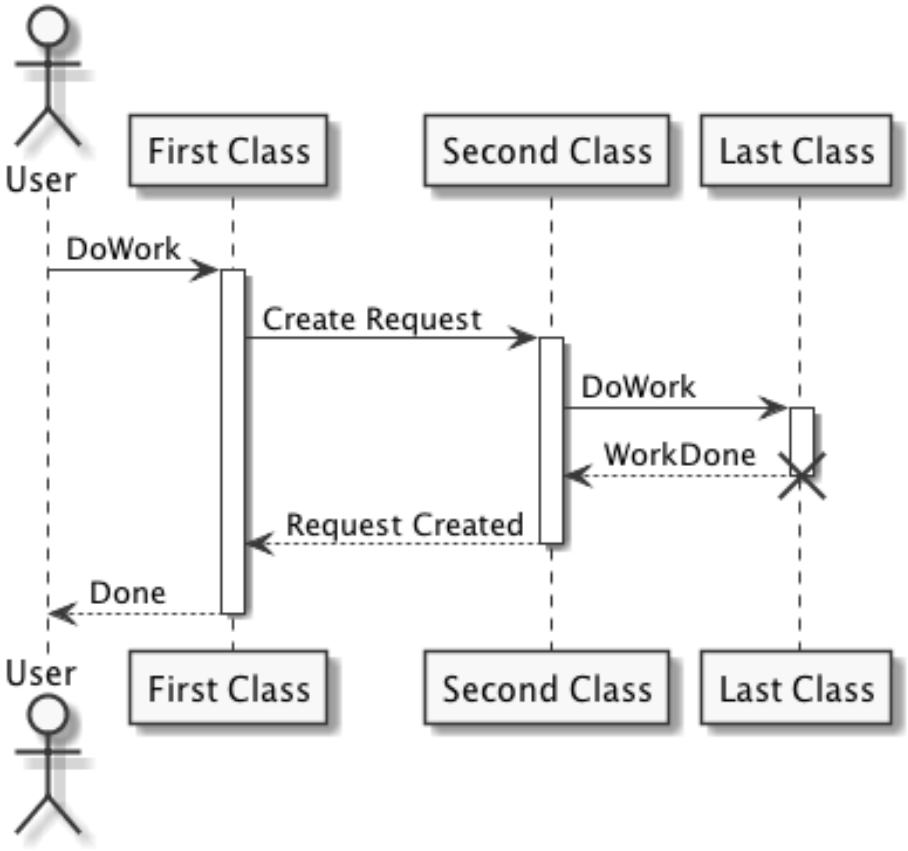

Figure 9: PlantUML Example 2

rdfdot Diagrams

rdfdot Options

- currently none apart from the General Options

rdfdot Examples

The following example produces Figure 10 on page 19.

```
~~~~~ {.rdfdot .scale=65% .title=rdfdot Diagram .label="fig:rdfdot-diagram"}

@prefix foaf: <http://xmlns.com/foaf/0.1/> .
@base <http://example.com/> .
<alice> foaf:name "Alice" ;
        foaf:knows [ foaf:name "Bob" ] .
~~~~~
```

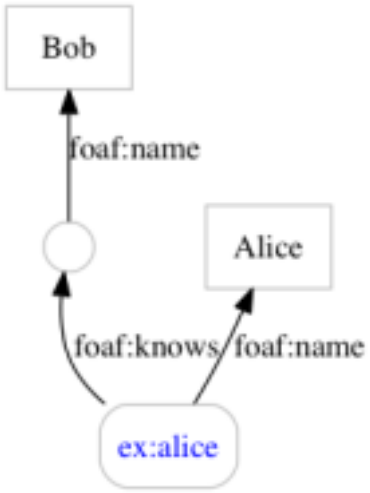

Figure 10: rdfdot Diagram

List of options

Renderer	Option	possible values
General	`.scale`	`1%`–`99%`
	`.label`	`fig:my-figure`
	`.title`	`"Some label for the figure"`
ditaa	`.rounded-corners`	
	`.no-shadows`	
	`.no-antialias`	
	`.no-separation`	
dot	N/A	
neato	N/A	
yUML	`.type=`	any of `[ class`, `activity`, `usecase ]`
	`.style=`	any of `[ scruffy`, `boring`, `plain ]`
	`.direction=`	any of `[ LR`, `RL`, `TD`, `]`
rdfdot	N/A
